

Modifications needed for demo:

- There should be one main company/organization/ministry defined. So maybe we can change companies into departments and departments into divisions (sub departments)
- Need a documents screen where all documents can be browsed and filtered instead of going to each employee's profile
- Remove any payment types from settings
- Remove bank information from employee and settings
- Remove deposit, expense, salaries and anything related to accounting and payroll
- Remove payment
- Remove payer/payee
- Keep only attendance and employees reports from reports
- Remove training
- Remove recruitment
- Remove events and meetings

- Remove project management
- Remove support tickets
- Remove finance
- Remove the unrelated sections from Roles
- Keep Arabic language only and remove all other languages

For Staff:

- Make sure gps/location is registered on clock in/out., or maybe define an IP range/network to determine if employee is within premise (if possible within demo)
